

# ASI-215 Synchro/Resolver/Control Transformer Test Panel

## Description of Operation:

The ASI-215 is configured to facilitate testing and alignment of synchros, resolvers, and control transformers. It can also be used for the calibration of heading and track selectors including the entire line of ASI Universal Track and Heading Selectors.

The ASI-215 allows easy interfacing of synchro/resolver information to a user-supplied HSR-103 or equivalent. The Test Panel also has phase and null detector outputs, and can test or align either 3-wire or 4-wire units.

The Test Panel comes complete with the following cables:

| MN        | Description                                    |
|-----------|--|
| ASI-21-5A | ASI-215 to ASI-140, 160, 160B, 160C            |
| ASI-21-5B | ASI-215 to ASI-150, 160, 160B, 160C, 190, 190B |

Size: H-8.75" W-19.0" D-14.0"

Power Requirements: 115 VAC, 57-500 Hz.
